

# Urine test – 24 hour collection: Catecholamine analysis

Your doctor has asked you to have a test for which you need to collect your urine for 24 hours. This fact sheet describes the purpose of the test, what it involves, and the collection steps.

## What is this test for?

It is used to detect certain health problems.

## What does this test involve?

The test consists of collecting all your urine in a container for 24 hours. The urine collected is used to measure certain elements to:

- make a diagnosis
- decide on a treatment (if needed)

## Where do I get a container?

Go to the CHUM Test Centre between 7 a.m. and 2:30 p.m., Monday to Friday. Bring your doctor's prescription with you.

The orange container you will be given is **the only container accepted** for this test.

## How do I prepare for the test?

Some medications can affect the test results. Your doctor may ask you to stop some of your medications one week before the test and for the duration of the collection. Talk to your doctor about this.

## How do I collect the urine?

- 1 On the container label, write:
  - your first name
  - your family name
  - the number of your CHUM medical record or your RAMQ health insurance card

LABORATOIRE DE BIOCHIMIE  
CHUM  
**NE PAS URINER DIRECTEMENT  
DANS LE CONTENANT**  
Conserver ce contenant au réfrigérateur  
Nom: *Luc Bienvenue*  
RAMQ OU #DOSSIER: *12345678*  
Date: \_\_\_\_\_  
heure: \_\_\_\_\_

- 2 Urinate in the toilet and empty your bladder completely. Immediately **write the date and time on the label** of the orange container. This is the start of the collection, even if you haven't yet put any urine into the container. The 24-hour countdown begins.

**3 Put all the other urine** from the next 24 hours (day, evening and night) into the orange container. To do this, urinate into a clean, dry container and then pour the collected urine into the orange container.

**Don't urinate directly into the orange container.** You risk burning yourself with splashes of the preservative.

### ATTENTION

If you use the same container each time to collect your urine, rinse it **only with hot water**. Don't use any soap, as this would distort the result of your test.

**4 The next day, at the exact time** the collection started, you must collect your urine one last time.

**Important:** Do it even if you don't feel like urinating. **Write the date and time on the label.** This is the end of the collection.

### Example of a collection

If collection begins on December 8 at 11:25 a.m., it should end on December 9 at 11:25 a.m. It doesn't matter what time you start. You only have to respect the 24- hour period.

## Are there any precautions to take during the collection?

- > **Keep the orange container in the refrigerator** throughout the collection.
- > Put **all urine** produced during the 24 hours into the orange container. Otherwise, the data collected will be incomplete. You will then have to start collecting all over again.
- > Be careful not to contaminate your urine with stool or toilet paper.

## What should I do once the collection is complete?

You have **24 hours** to return your clearly identified orange container to the CHUM Test Centre between 7 a.m. and 2:30 p.m., Monday to Friday. **Don't forget to bring your doctor's prescription.**

## When will I get the results?

Your doctor will give you the test results at your next visit.
